

INVOLVE COMPANIES/SCHOOLS IN SUSTAINABILITY ISSUES

1. Global warming and climate change are complex phenomena, difficult to explain in all their magnitude, but about which it is essential to convey, to society in general and to students in particular, their operating mechanisms, risks, forecast future and above all what to do. The CEACV is in charge of this, by making materials available to educational centers to work on these issues, among which the following stand out:

- understand climate change
- Canvi Climàtic to the Valencian Community

2. The next step is to relate climate change to the daily activity of the educational center and the people who make up the school community.

3. And finally, make proposals for action to reduce the footprint and even compensate for what is emitted by the school community. To work on both aspects, the National Center for Environmental Education (CENEAM) has a mini-portal on its website with educational resources (Education and Communication against Climate Change). There is also the information offered on the OECC portal 741447
